Monitoring Well & Cable Route Warning Markers

Monitoring Well & Cable Route Warning Markers are the ideal way to notify and warn others about the location of monitoring wells and underground cables. They are invaluable in providing safety and greatly assist in the reduction of accidental digging and costly service interruptions.

Constructed of a special fibreglass reinforced composite, the markers are lightweight, extremely durable and can handle vehicle impact, harsh weather, contact with wild animals, and vandalism. The material is also able to endure small grass fires and controlled ditch burns; it will not soften and melt like plastic markers. The Monitoring Well & Cable Route Warning Markers are produced in an industry standard colour (bright orange) that will never fade, and the marker itself will never crack, rust, or rot like wood and metal markers.

An optional Post Driver for the marker offers quick and easy installation. This simple, two-handed tool, has an opening at the bottom where the marker is inserted and then driven into the ground with successive taps.

> APPLICATIONS

Where visible notification of monitoring wells and underground cables is required.

> FEATURES

Flexible - fibreglass reinforced.	Pre-labelled.
Produced with a bright orange colour that is industry standard.	Resistant to fading, cracking, rusting and rotting.
Quick and easy installation with optional Post Driver.
